Purofort Yellow Steel Toe Work Boots

OVERVIEW

The Purofort™ exterior is not only strong but also extremely lightweight. Made of CFC-free water-blown polyurethane, the boot is lighter and more durable than PVC. This boot provides a greater range of movement and is resistant to oil, fat, fuel and other petrochemicals. The molecular structure provides thermal insulation to keep feet warmer when it's cool, and cooler when it's warm. A shock absorbent heel and removable cushion insole provide all-day comfort while the ASTM F2413-05 M I/75 C/75 EH standard steel toe provides jobsite protection. The cleated outsole is both oil and slip resistant.

SIZE & FIT

Lasting System

A better last means a better fit. The last is the foundation we build our boots around. A good last makes the difference between boot that fits just okay and a boot that fits just right. So we make sure our lasts are designed with your performance needs in mind.

Width

This boot is available in a Medium Width.

Tips for the Perfect Fit

- Measure both feet. If one foot is slightly larger than the other, select a size that fits the larger of the two.
- Consider the type of socks you'll be wearing with your boot. For thicker socks, you may want to select a half size larger than you normally wear.
- When you do receive your boots, we recommend first wearing them indoors for a few hours to ensure they're the right fit.
